

Express Maintenance Release Notes

Express Maintenance Release 9 introduces a wealth exciting features. It includes many enhancements to the overall interface as well as powerful new features and options to make your maintenance management even easier. The following is a general summary of the many changes in version 9.1. Be sure to print and follow the Version 9 Update Guidelines (important).

Release 9.5.2.1

General – Incorporates new version and features of Report Builder.

General – Imports 5 new reports used by the Mobile App.

General – New fields to accommodate the new Mobile App settings and licensing.

General – Update includes the new Mobile App Server software for communicating with mobile devices.

Administration / Defaults / Configuration – New Mobile App Settings section and fields for Mobile App Setup.

Maintenance / Work Orders – Corrected issue of one of the user defined service fields having the incorrect column heading.

Maintenance / Units – Corrected issue of older attachment hyperlinks not working.

Express Request – Added ability to view notes of a work order services when viewing assigned work order.

Release 9.5.2.1

General – Corrected performance issue when querying and updating data.

General – Improved Hyperlink dialog interface in notes editor throughout program.

General – Added additional indexes on certain tables to improve performance especially on Requests table.

Parts / Receiving – Adjusted to prompt for new part cost even if the current cost is set to 0.

Express Request – Adjusted to allow selection to View All Request (other user's requests) based on settings in ExpressMaintenance / Administration / Configuration / ExpressRequest.

Release 9.5.1.1

Administration / Configuration / Performance Settings – Added option to turn On / Off the SQL Connection Monitor for all users. The connection monitor will ping the SQL Server every 60 seconds to verify connection. We recommend you set this option to On.

Administration / Configuration / Performance Settings – Added option to set the number of SQL Connection Retry Attempts for all users. When the connection to the SQL Server is lost, the program will attempt to reconnect the specified number of times before terminating. We recommend you set this option to 5 to 10 retry attempts.

Administration – Added button 'SQL Monitor' option to set the status of SQL Connection Monitor On / Off for the current session of the program.

Express Maintenance & Express Request – Added code to ping SQL Server every 60 seconds to confirm connection if SQL Connection Monitor is turned on.

Express Maintenance & Express Request – Added code to terminate program and write status to log 'Connection.Log' file when connection to SQL Server is lost and specified number of reconnect attempts have been met.

Express Maintenance & Express Request – All SQL Server connection errors are now written to the ConnectionErrors.Log file in the folder with the program file Maintenance.exe.

Release 9.4.4.1

Admin / Configuration / Purchase Orders – Added field setting to turn off ability of users to edit the PO Number in the PO screen.

Parts / Receiving – Corrected issue of error message when importing a non-numeric PO Number.

Maintenance / Work Orders – Corrected issue of program hanging when creating a work order from a Request and invalid required fields was not populated.

Maintenance / Work Orders – Adjusted to allow selection of All or <All> in search criteria.

Maintenance / Units – Added the ability to view / enter time in the Current Count and Installed date time fields.

Purchase Orders / Emailing – Removed the debug message being shown when emailing a PO or RFQ.

Purchase Orders – Improved functionality of the procedure performed when Void button is clicked.

Admin / Employees / Activity Log – Corrected issue of search date range not working correctly.

General – Corrected problem that was preventing international dates to properly verifying registration code.

General – Adjusted program throughout to properly reflect ‘Deleted’ in user activity log when user deletes a record. In some cases it was logging as ‘Edited’ rather than ‘Deleted’.

Release 9.4.2.4

Admin / Employees – Added Access Setting for Work Orders Group to limit employee to viewing and editing only work orders of their work group.

Maintenance / Work Orders – Added functionality to limit employees to their work group if applicable per employee Access Settings.

Parts / Receiving – Re implemented code to warn user if duplicate vendor records with the same invoice number are entered.

Admin / Services – Corrected issue of Labor Estimate field being formatted as currency when it should be number.

Parts Receiving / Importing Receiving – Corrected issue of part record number not being determined and thus records not being imported.

Release 9.4.2.1

Maintenance / Work Order Overview – Added features to allow completion of all flagged work orders at once.

Maintenance / Work Order Overview – Added feature to allow right click and immediate completion of selected work order.

In order to use the above features, you must turn on Work Order Overview editing under Admin / Configuration / Scheduling.

Release 9.4.1.8

Maintenance / Units – Added button for new report of Unit Attachments With Services.

Maintenance / Parts Analysis – Added three new columns in grid to reflect total value of parts based on quantity and Current Cost, Average Cost and Billing Price.

Notes Utility – Adjustment to Notes Utility to correct any issues with text only version of Request notes.

Release 9.4.1.5

Purchase Orders – Corrected issue of email body not being populated with body from configuration.

Work Orders – Corrected issue of email body not being populated with body from configuration.

Release 9.4.1.4

Parts / Reordering – Corrected issue of not being able to create PO for all parts of the selected vendor.

Release 9.4.1.3

Maintenance / Work Orders / Service Overview – Added Unit Make, Model and Criticality fields to be available in grid.

Maintenance / Work Orders / Service Overview – Added the ability to search by Unit Criticality.

Release 9.4.1.1

Maintenance / Service Overview – Corrected issue of notes not being visible in editor.

Maintenance / Work Orders – Corrected issue of notes not being visible in the overview grid.

Maintenance / Work Orders – Corrected issue of not being able to search on notes in the overview grid.

Maintenance / Work Orders – Corrected issue of search calendar not being visible initially.

Maintenance / Work Orders – Corrected issue of printing duplicate service notes when sending directly to printer without previewing first.

Release 9.3.9.4 Revision

Maintenance / Work Orders – Corrected issue of grid settings not being applied.

Admin / Rebuild Views – Adjusted to include interval data from the unit / services.

Release 9.3.9.2 Revisions

Maintenance / Update Counts – Improved interface and adjustment to allow for Microsoft ODBC changes.

Maintenance / Work Orders – Adjustments to prevent scrolling when record is in edit mode.

Purchase Orders – Adjustments to prevent scrolling when record is in edit mode.

Parts / Receiving – Adjustments to prevent scrolling when record is in edit mode.

ExpressRequest – Adjustments to prevent scrolling when record is in edit mode.

Release 9.3.8.7 Revisions

Parts Receiving – Corrected issue of program not prompting to update part current cost if changed.

ExpressRequest – Corrected issue of wrong unit being selected when units have the same name.

Release 9.3.8.5 Revisions

Performance – Changed the Query Cursor Type to 'Automatic' under Admin / Configuration / Performance Settings to provide best possible performance of queries.

Equipment / Units – Improved performance when creating a work order from the Units screen.

Report Builder – Corrected issue of error when attempting to save a report to a new name.

General – Added Express Maintenance.ini file information to File / View Connection Info.

General – Miscellaneous cleanup and adjustments.

Release 9.3.7.3 Revisions

General – Corrected issue of reports duplicating notes from previous record rather than refreshing notes field.

General – No database changes.

Maintenance / Reports – Added search criteria for Service Technician to pass wot WoServices query for employee assignment in services detail section.

Maintenance / Units – Corrected issue of Attachment Reference field being limited to 80 characters rather than 250.

Release 9.3.6.1 Revisions

Admin – Added option under work orders to setup user fields 1-3 for parts section of work orders.

Work Orders – Parts section now has separate (from services) setup for user fields 1-3 column headings.

Work Orders – Corrected issue of user fields 1-3 only allowing 1 character when no lookup lists exists.

General – Corrected URL links for help and release notes at website.

Release 9.3.5.1 Revisions

General – Adjusted notes editor to allow for drag & drop of images into notes.

General – Updated all date fields that contain 0 to be null value to prevent display of 12/30/1899.

General – Updated help and support links to use proper URLs.

Admin / SQL Statements – Inserted scripts to correct Search Tag fields if user has issues with these fields.

Equipment – Adjusted ‘Model’ and ‘Criticality’ fields to allow for manual entry in addition to pick list selection.

Equipment – Adjusted fields under Device tab to allow for manual entry in addition to pick list selection.

Equipment – Corrected issue of error when certain conditions exist when duplicating a unit.

Parts – Adjusted ‘Criticality’ field to allow for manual entry in addition to pick list selection.

Admin / Reports Management – Added option to reset reports to a status of not converted to allow for conversion of reports from version 8 to 9 after importing version 8 reports.

Rolodex – Corrected issue of other users not being able to see ‘Community’ records.

Requests – Added Clear button in search panel to clear / refresh search settings..

Work Orders – Adjusted Reference field to allow for data entry in addition to pick list.

Work Orders / Parts Details – Added fields for selecting part by number and name rather than using a single field for both methods.

Work Orders – Corrected issue of Parts Import utility not working properly for importing parts consumption.

Release 9.3.3.3 Revisions

Work Orders – Removed debugging message appearing upon insert of work order that reflects a ‘0’ in a message box.

Release 9.3.3.2 Revisions

General – Improved cursor focus to first field on all screens when user clicks Insert (+) button.

Purchase Orders – Adjusted to use previously used date when user is Inserting new records from past date.

Parts Receiving – Adjusted to use previously used date when user is Inserting new records from past date.

Release 9.3.3.1 Revisions

General – Misc. adjustment of various grid column alignments.

General – Added code to adjust SearchTags to proper field type for databases with wrong type.

Maintenance / Work Orders – Corrected error when inserting a new work order if not administrator and service is required.

Release 9.3.2.1 Revisions

Maintenance / Requests – Program changed so that users can Select multiple requests for creating work orders.

ExpressRequest – New release assigns value to Selected field for processing by maintenance.

Release 9.3.1.3 Revisions

General – Improved handling of export and attachments folder for using My Documents when folder is invalid.

Administration / Configuration / Data Settings – Added option to enter “\$Documents” to direct program to use local Documents folder for Exports, Attachments and Forms.

Maintenance / Work Orders – Corrected issue of Complete button not functioning fully when the work order is in Insert mode and the Complete button is clicked.

Maintenance / Units – Added Parts Category (display only) to Parts grid under Parts tab.

Release 9.3.1.1 Revisions

General – Misc. adjustments to Administration / Backup & Restore database options.

Release 9.3.9.6 Revisions

Equipment – Corrected issue of email list saving but not displaying for individual units of equipment.

Parts Reports – Corrected issue of ‘criticality’ and ‘status’ selections not passing to report search criteria.

Express Request – Corrected error on login when only one record was found.

Express Request – Corrected error when selecting to view the email list for a request.

ExpressRequest – Adjusted so that Unit Number is displayed rather than Unit Record Number.

Release 9.2.9.3 Revisions

General – Adjusted update to handle situations where users have database type mismatch in database structure where numbers are not of float type.

Update automatically converts to numeric with precision of 5.

General – Improved handling of notes editor when user clicks on another form or area of program while editing notes.

General – Improved error response when program fails to connect to the SQL Server / Database.

Release 9.2.8.1 Revisions

General – Added support for languages that read right to left in notes fields and Standard notes editor (not supported in enhanced notes editor).

Admin / Configuration / Data Settings – Added option to define language read direction (left to right / right to left).

Express Request – Added support for language read direction in Standard notes editor.

Purchase Orders – Adjusted code to apply / un-apply Date Closed when PO is marked as closed / open.

Purchase Orders – Changed Date Closed field to allow manual override / edit by user.

Purchase Orders Closing – Adjusted code to apply / un-apply Date Closed when PO is marked as closed / open.

Release 9.2.7.2 Revisions

Parts Receiving – Corrected issue of total being doubled on post of receiving record.

Work Orders Overview – Adjusted to allow edit of Work Order Class field in overview grid.

Parts Analysis – Adjusted to accommodate different date formats in search criteria

Express Request – Adjusted to accommodate the new option to use Standard or Enhanced (default) editor.

Release 9.2.7.1 Revisions

General – Misc. cleanup in various areas of program.

Admin / Configuration / Data Settings – Added option for 'Notes Editor Style', Standard or Enhanced (default) for situations where users should not add advanced notes and for use with Arabic languages reading from right to left which is not supported by the enhanced editor.

Work Orders – Adjusted parts detail section so that Taxable setting from the part when it is selected.

Purchase Orders – Adjusted so that if a unit is selected in upper section, it is automatically inserted in detail section if not other unit is selected.

Notes Utility – Adjusted code for better operation and more accurate reporting of oversized notes.

Release 9.2.6.7 Revisions

General – Adjusted search panels to only use Enter press if the cursor is in the search panel.

General – Added code to prevent deleting records from overview grids.

General – Misc. cleanup and adjustments in various areas of program.

Scheduler – Increased event / appointment notes from 60 characters to 255.

Requests – Adjusted to lookup unit by name or number to verify if a valid unit is selected.

Requests – Minor adjustments to improve performance and ensure notes are reflected in grid.

Express Request – Adjusted to get and save the unit name and number when a unit is selected.

Release 9.2.6.1 Revisions

General – Added 3 user definable text / lookup fields to Purchase Order Details, Work Order Services, Work Order Parts and Equipment Services grids with caption / headings definable in Admin / Configuration under applicable sections. To enable the new columns in the grids, right click in grid and select 'Reset Grid Layout.'

General – Added 3 user definable checkbox fields to Purchase Order Details, Work Order Services, Work Order Parts and Equipment Services grids with caption / headings definable in Admin / Configuration under applicable sections. To enable the new checkbox columns in the grids, right click in grid and select 'Reset Grid Layout.'

General – New revisions to Notes Editor allows for faster and improved cursor movement in tables when using arrow keys.

General – Removed SQL Statements from Utility section and moved to Administration section for better security.

Reporting – Implemented new release of Report Builder version 18.

Work Order Overview – Changed so that initial search setting is based on Scheduled (non-completed) work orders and date range as setup under Admin / Scheduling.

Work Orders – Corrected issue of Jump to Unit not finding the unit record.

Release 9.1.7.1 Revisions

General – Corrected calculation process when checking size of notes fields.

Administration / Configuration / Security Settings – Added option to make login entry case sensitive or insensitive.

Administration / Employees – Added Login to list of available fields in overview grid.

Equipment (Units) – Added display of Record Number field to data screen.

Parts – Added display of Record Number field to data screen.

Requests – Corrected issue of notes not updating after a search / filter to single record.

Requests – Corrected notes error when assigning a request to a work order.

Work Orders – Added display of part number in parts section of work order details.

Notes Utility – Misc changes and improvements in the processing and options.

Release 9.1.6.3 Revisions

General – Added option to 'Export Grid Data' to all grid right-click popup menus.

General – Added option 'Reset Grid Layout' to all grid right-click popup menus.

General – Added saving of Search Panel status on exit of form with search panels (example: Work Order Overview) so when form is closed and then re-opened, it returns to previous state (visible / non-visible).

Application Preferences – Added option to use tabbed maximized forms.

General – Corrected issue of program allowing user 'sa' to login without a password.

General – Corrected issue of initial login as 'sa' not allowing access to Admin / Employees for setting up access setting for 'sa' and other users.

General – Corrected issue of Notes field 'Check Size' not reporting accurate size.

General – Corrected issue of email sending automatically requesting a return receipt even when option is unchecked.

General – Corrected issue of random 'Argument Out of Range' error when selecting from pick lists.

Admin / Configuration – Added option to set Max Notes and Max Pictures sizes to 0 for unlimited size. This change is to accommodate existing large notes but this setting is not recommended.

Equipment (Units) – Corrected issue of Work Orders tab not populating when selected.

Equipment / Services (PMs) – Adjusted service parts detail to show part number and other parts data when viewing in grid display.

Parts / Receiving – Corrected issue of program not prompting to change the current cost of part.

Maintenance / Reports – Corrected issue of date range passing incorrect time thereby not including records matching the beginning date.

Work Orders Overview / Service Overview / Calendar View – Corrected issue of print options only being enabled the first time the calendar / scheduler form was displayed.

Work Orders Overview -Enabled ability to double-click to switch to Data tab as in other forms. The exception is if the user double-clicks in an editable cell (Flag, Employee, Scheduled Date, Priority).

Work Orders Overview – Added ability to view work order notes in overview grid.

Work Orders – Adjusted auto completion of services and parts to use the work order completion date rather than current system date.

Service Overview – Enabled ability to double-click to flag a service for work order creation. The exception is if the user double-clicks in an editable cell.

Purchase Orders – Corrected issue of unit information not populating after a unit is selected.

ExpressRequest – Corrected issue of emails not being sent when Request is created.

Release 9.1.6.1 Revisions

General – Adjusted all check box components to show unchecked when null.

General – Adjusted all grids to exclude notes fields for improved performance including Units, Parts & Work Orders.

General – Adjusted all grids to apply filter values without requiring pressing Enter or exiting the cell.

General – Adjust lookup combo components to show the sort order when selected.

Employees / Access Settings / View Activity Log – Added option to print login / logout activity report.

Equipment (Units) – Corrected issue of user fields requiring select from list and not allowing edit.

Equipment (Units) – Corrected issue of user fields not limiting selection list to applicable codes.

Equipment (Units) – Corrected issue of duplicating unit failing.

Parts – Corrected issue of user fields requiring select from list and not allowing edit.

Parts – Corrected issue of user fields not limiting selection list to applicable codes.

Parts – Corrected issue of duplicating part failing.
Purchase Orders – Added ability to search by Part Name and Number.
Purchase Orders – Adjusted to allow for up to 4 digits beyond decimal in pricing fields.
Purchase Orders – Corrected issue of authorized users not being able to approve POs.
Purchase Orders – Corrected issue of duplicating including receiving data.
Work Orders – Corrected issue of not being able to flag all work orders for printing when date range was used for searching.

Release 9.1.5 Revisions

General – Added Search button in all screens to access the Filtering option from Data tab.

General – Adjusted all grids to apply filter values without requiring pressing Enter or exiting the cell.

General – Created new Emails table and setup fields for future implementation of Express Email Server.

Purchase Orders – Corrected permission issue when creating new record.

Service Overview – Misc corrections in report of services due by Unit.

Work Orders – Corrected issue of general and safety notes being reversed when created from a Request.

Notes Utility – Adjusted to report additional information about the record rather than just record number.

Release 9.1.4 Revisions

General – Altered filter column default to 'contains' operator rather than '=' in logical places such as Parts Description and Units Name to make quick searching easier.

General – Adjusted date based queries to accommodate international date formats.

Maintenance / Work Orders – Added ability to search by Unit Name and Number in search panel.

Maintenance / Work Orders – Added 3 user definable fields to the Services grid.

Maintenance / Work Orders – Corrected issue of Print button not functioning in the print interface.

Admin / Configuration / Work Orders / General Settings – Added options to define the column captions for the 3 user fields in Work Order Services grid.

Purchase Orders – Corrected issue of permissions not allowing edit / insert of record.

Release 9.1.3 Revisions

General – Updated notes fields to convert bitmaps to png for smaller content saving in the database fields.

General – Adjusted Notes Utility program to convert bitmaps to png for smaller content saving in the database fields.

General – Misc. cleanup of buttons, popup menus and field components in various screens as needed.

Admin / Configuration / Data Settings – Added option to set default folder for exporting reports and data.

Admin / Configuration / Scheduling Settings – Added option to indicate if editing is allowed in the Work Order Overview screen. If editing is allowed, only the Flagged, Scheduled Date, Employee and Priority fields are editable from the overview screen.

Admin / Codes – Adjusted printing to allow print of a single code type or all codes.

Service Overview – Corrected issue of report not including count based PMs in report.

Service Overview – Corrected issue of work orders not using the PM scheduled date when scheduled date was blank in creation screen.

Utilities / SQL Statements – Adjusted to disable the 'Execute SQL' button when the Overview tab is the active page. Users must go to the Data tab and view the full SQL statement before executing it.
